YOUSUF MOHAMMED

FOUNDER & LEAD SOFTWARE DEVELOPER | SOFTWARE ARCHITECT | TECHNOLOGY ENTREPRENEUR

yousufcodes7@gmail.com | vendorahq.app | myousufcodes.github.io/Digital-Portfolio/

EXECUTIVE PROFESSIONAL PROFILE

Technology entrepreneur, full-stack software developer, and founder of VendoraHQ, an independent retail technology venture developing integrated software for modern retail businesses. Leads the venture's product direction, application architecture, backend engineering, database design, merchant workflows, and technical development planning.

Engineering focus includes multi-tenant SaaS platforms, Django and REST APIs, relational databases, authorization and auditability, payment integration architecture, and practical retail automation. Combines hands-on software development with retail operations experience and ongoing undergraduate studies.

FOUNDER AND ENTREPRENEURIAL EXPERIENCE

Founder, Lead Software Developer & Product Architect — VendoraHQ

Independent retail technology venture | Development, testing and launch preparation

- Founded VendoraHQ and defined a product ecosystem spanning VendoraPOS, VendoraKiosk and the planned VendoraLoyalty customer application.
- Set product requirements and technology priorities based on practical retail workflows, including checkout, inventory, employee operations and reporting.
- Designed Django/Django REST Framework backend services, REST APIs, database structures and merchant-facing application logic.
- Worked on multi-tenant data separation, role-based permissions, administrative governance and audit history to support merchant privacy.
- Designed provider-managed payment integration and verification requirements, including transaction integrity, idempotency and reconciliation safeguards.
- Directed iterative implementation, testing, debugging, technical documentation and launch preparation; commercial adoption is not yet claimed.
- Established the venture's public website and product positioning while preparing for pilot evaluation and merchant onboarding.

VENDORAHQ PRODUCT ECOSYSTEM

VendoraPOS — Retail Point-of-Sale & Store Management Platform

Founder, Software Architect & Lead Developer | Functional software under testing and security refinement

- Developed core workflows for retail checkout, product and inventory management, sales reporting, employee operations and merchant administration.
- Designed REST APIs, relational models and business logic for sales transactions and store management.
- Established permission models, tenant isolation and auditability requirements for merchant and platform-level operations.
- Designed provider-managed terminal payment architecture with verified approval before card-paid checkout completion.
- Defined safeguards for duplicate requests, uncertain payment states, reconciliation and consistency between tenders and completed sales.
- Focused on reliable transaction processing, maintainable application architecture and operational data integrity.

VendoraKiosk — Self-Service Retail Technology

- Developed a self-service retail software product intended to complement merchant checkout operations.
- Worked on customer-facing workflows, interface usability, product architecture and integration requirements within the VendoraHQ ecosystem.
- Continuing technical refinement and testing ahead of commercial introduction.

VendoraLoyalty — Planned Customer Engagement Application

- Defined the product concept for a future customer rewards, engagement and merchant-connected loyalty experience.
- Envisioned customer accounts, rewards management and integration with the broader VendoraHQ ecosystem; dedicated app development is forthcoming.

ADDITIONAL TECHNOLOGY PROJECTS

Aqvera — Backflow Compliance SaaS

- Worked on Django/DRF and Next.js application architecture for a multi-tenant compliance platform.
- Implemented or tested tenant-isolated customer, property and device workflows, authentication, authorization and API behavior.

DealerOps — Multi-Location Retail Operations Software

- Planned a multi-organization operations platform with scheduling, store performance tracking, targets, employee management and reporting.
- Designed requirements for owner/manager permissions, audit history and centralized workflow automation; planning-stage project.

PlayOn — Android Media Application

- Evaluated and customized an open-source Android media application foundation, focusing on codebase inspection, playback experience and interface development.

Personal Portfolio and Web Projects

- Published responsive web projects and a developer portfolio; portfolio: myousufcodes.github.io/Digital-Portfolio/.
- Additional project site: arksite.netlify.app.

Student Records Database — Academic SQL Project

- Created a student-record database and SQL queries for insertion, retrieval, filtering and reporting.

RETAIL INDUSTRY EXPERIENCE

Retail Sales & Store Operations — Metro by T-Mobile

- Supported customers with mobile products, service activations, account-related requests and retail transactions.
- Gained practical experience with sales reporting, store procedures, customer support and fragmented operational workflows.
- Applied retail observations to identify opportunities for software automation and better store-management tools.

TECHNICAL EXPERTISE

Programming & Web: Python, JavaScript, Java, SQL, HTML, CSS; React and responsive web interfaces.

Backend & Data: Django, Django REST Framework, REST APIs, PostgreSQL, relational data modeling and multi-tenant SaaS architecture.

Security & Payments: Authentication, authorization, role-based access control, tenant isolation, audit logging and provider-managed payment workflow design.

Tools & Practices: Git, GitHub, Visual Studio Code, debugging, testing, technical documentation and iterative software development.

Business & Leadership: Product strategy, technical decision-making, requirements analysis, retail operations and startup development.

EDUCATION

Bachelor of Science — Computer Science & Information Technology | Monroe College, Bronx, New York

Expected graduation: September 2027 (from earlier resume; confirm current institution and date before publication).

GED | American English Center, New York | September 2023

High School Diploma | Success Junior College, Hyderabad, Telangana, India | March 2021

RELEVANT ACADEMIC STUDIES

Introduction to Programming • Web Development • Database Management • Information Systems • Business Communication

PROFESSIONAL STRENGTHS AND LANGUAGES

Software architecture; backend engineering; technical problem-solving; business workflow analysis; product planning; application security; retail technology.

Languages: English • Hindi • Urdu • Telugu

PROFESSIONAL OBJECTIVE

Continue developing VendoraHQ into a retail technology business while advancing secure SaaS engineering, testing, commercial launch preparation and measurable real-world software impact.
